WORK EXPERIENCE

Frontend Developer - GreedyGame (Product based startup)

(Jan 2023 - Sep 2024)

Project - Offerwall - Next.js, TailwindCSS, Android JS Bridge, Axios

Developed the project from scratch using Next.js 13, successfully delivering a pixel-perfect and performant UI, ensuring its timely completion under my responsibility. This project's expectation was \$100 per day in its first month, but we have reached \$1000 per day within the first month. This offerwall has been served to millions of users, delivering a smooth and reliable experience.

Project - Dashboard - React, Redux, Material UI, Axios, SCSS:

I developed core features and core components across the dashboard, including a plug-and-play analytics component that streamlined complex pages. I enhanced chart visuals using Recharts and implemented user-driven improvements like annotations to create a more intuitive UX. These optimizations were informed by user interviews, emphasizing both technical and design skills. Also worked on a CustomUI Library for the dashboard.

I contributed to [Epicplay](#), a gaming website, as well as business sites like [pubscale.com](#) and [greedygame.com](#), all built on Next.js. Additionally, I supported development on other products, including [Sikka](#).

Frontend Developer Intern (Remote) - GreedyGame

(Oct 2022 - Jan 2023)

Business Websites - Next.js 12/13+:

I worked on improving the UI, UX and SEO of the Business website of GreedyGame.

Revamped several pages, and introduced [Schema markup](#) for rich results in search engine result pages.

Created landing pages which resulted in good conversion rates for the products.

TECHNICAL SKILLS

React.js, Next.js, Redux, Javascript, SCSS, TailwindCSS, HTML.

PROJECTS

[Dashboard](#) - Nextjs, React table, Shadcn-ui, TailwindCSS, Radix UI, Supabase / SQL.

I built an admin dashboard to optimize and scale business processes, utilizing Supabase for managing admin and user roles and RLS policies for database security. The frontend includes user-friendly elements like paginated and searchable tables and forms.

[GitHub-repository](#) - [Admin Dashboard](#)

[Timmy](#) - Next.js, Cannon.js, Three.js

I was bored on a Sunday and made this three.js project, with an interactive character named Timmy. This site currently only works on desktop screens.

Election Application using Blockchain - Reactjs, Razorpay SDK, MongoDB, ExpressJs.

For my 3rd year B.Tech project, I developed a frontend application for elections, incorporating authentication and authorization, along with Razorpay payment integration.

[GitHub-repository](#) - [online voting system - frontend](#)
